1. **Content Orientation**:
   - **Desktop**: The `section.content` is displayed using a row flex direction, meaning items inside this container are displayed side by side in a row.
   - **Mobile**: The `section.content` switches to a column flex direction, meaning items inside this container are displayed on top of each other in a column.
2. **Image Display**:
   - **Desktop**: The image has a maximum width of 200 pixels.
   - **Mobile**: The image has a changed maximum width of 100 pixels and is horizontally centered using margin auto.
3. **Header Padding**:
   - **Desktop**: The header has a fixed padding of 10 pixels.
   - **Mobile**: The header's padding is set to 5% of the viewport width, making it adjust based on the screen width. The header is also set to display its child elements in a flex row with space between items.
4. **Navigation Elements**:
   - **Desktop**: Navigation list items have a margin of 20 pixels to their right.
   - **Mobile**: Navigation list items have a margin to their right set as 5% of the viewport width, making them spread out proportionally based on screen width. Additionally, the font size of these items is set to 3% of the viewport width, making text adjust its size based on screen width. Navigation links are also padded with 1% of the viewport width horizontally and 2% of the viewport width vertically, to make them more touch-friendly.
